- 1 Facts first, as flashcards.**
Drill the facts as flashcards before written practice. Quick recall frees the brain for the harder problems instead of getting stuck counting.
- 2 Short timed drills build recall.**
A few minutes against a timer, a few times a week. Retrieving an answer from memory, not re-reading it, is what makes it stick. That is retrieval practice.
- 3 Space it out, don't cram.**
A little each day across a week beats one long session. Spaced practice is one of the most reliably effective study methods there is.
- 4 Ask 'how,' not just 'what.'**
On the harder ones, have your kid walk you through how they got it, not only the answer. Understanding the steps is what transfers to the next problem.

This is exactly how TutorBuddi teaches: it guides your kid with questions and adapts to their level, instead of just handing over answers. Want practice tailored to your kid?
